University Programs

Windows® Source Code Licenses

Microsoft® makes source code to Microsoft operating system products like Windows XP, Windows 2000 and Windows CE available to universities and other "not-for-profit" research institutions at no charge. Currently, there are over 100 universities worldwide with our source licenses.

Institutions with source

Your institution may already have a source code license. Please check [this list](#) before requesting a license.

Features of the Source License

- No cost
- Intellectual property created with the use of source code is owned by the university or author, depending on the policies of the licensing institution.
- Source licensees can share source or other source-based work with other source licensees.
- Source is licensed to the requesting organization, not individuals to insure broad internal access.
- No employment restrictions as the result of viewing or using the source.

To request a copy of a source code license for a particular product, please send fill out our [license request form](#).

NOTE: Microsoft is unable to ship source code under this program to all countries, due to limited resources to fulfill and support source code requests. We will be re-evaluating this decision again in the future (as time and resources allow) to assess the feasibility of granting requests. Microsoft retains the right to refuse requests for any reason, and there is no guarantee implied or otherwise, that your request for source will be granted.

This is a license designed for university based research. Organizations that are not affiliated with a university or government sponsored research lab are generally not eligible for this license. If you do not meet this requirement, please visit <http://msdn.microsoft.com> for information about the Microsoft Developer Network, or contact your local Microsoft office and/or account representative.

The license agreement requires the signature of a dean or other officer of your organization.

This program and the terms of the license agreement are subject to change without prior notice. Non-compliance with any terms of the licensed agreement signed by your institution will immediately lead to revocation of the license.

All source distributions for research use are UNSUPPORTED. There are no mechanisms in place for help with interpretation or compiling of the code.
