city, he said.

If you've yet to see Stallman speak for yourself, you can find out when he's next coming to a venue près de chez vous. Tags: Cloud Service Providers, Digital Service Providers, MSPs, VARs/SIs, Open Source RELATED 17 comments Lazza April 18, 2016 @ 8:45 pm » with little apparent » with little apparent sympathy for people who are victims of terrorism Quite sick, but predictable. Stallman started an awesome movement with great ideals. Unfortunately, nowadays it seems his only interest is to push the FSF agenda at any cost, including bad mouthing Linux, Mr Torvalds, many popular distros such as Debian and Ubuntu... Of course not caring about anything else. This is a pity! Anonymous April 18, 2016 @ 10:13 pm "" but there is no evidence "" but there is no evidence that Torvalds does not also care about users' or programmers' freedom "" I've been following news stories and blogs about Torvalds and Stallman for a couple decades now. I'm not prepared to direct you

I think few people would I think few people would disagree that Torvalds and Stallman do not care about freedom "on the same level." Certainly Stallman cares more. But Torvalds's statements (e.g., Stallman "deserves a monument in his honor for giving birth to the GPL") suggest that freedom does matter significantly to him. So does the fact that he decided to license Linux under the GPL in 1992. If he did not care about freedom, he might have gone with a BSD-style license, which would have made at least as much sense in the early 1990s (when BSD had just become usable on its own) as the GPL. Anonymous April 19, 2016 @ 2:08 am Reply Although he's technically Although he's technically right about terrorism being extremely rare, it doesn't sound very politically correct when he says it. (non-PC things tend to upset people) Anonymous April 19, 2016 @ 3:48 am Reply

There are already There are already distributions with their own names. Your comment does not make any sense. Also one OS using the Linux kernel but not GNU is Android. It comes usually with locked root and has lots of malware. Anonymous April 19, 2016 @ 8:41 am Reply THANK YOU! I'm so sick of

THANK YOU! I'm so sick of this whole GNU/Linux BS. GNU is a project governed by RMS. Linux is governed by Linus Torvalds.

RMS says that Linux is no part of the FSF or GNU, so for him to keep saying that it should be called GNU/Linux is completely

That he keeps saying "GNU/Linux" is crazy. Do a distribution with GNU software and can call it whatever you like. But linux is

been reduced in 5 years. It's not the rest by any means.

only fair to not exclude all the other software. Debian Linux is not GNU/Linux.

So for GNU to be only 8 percent now is a big departure.

Include libraries or not?

accurate, less invasive.

"The rest is GNU".

"The rest is GNU".

No, it

"The rest is GNU." KDE is

the 1990s. I am not sure that GNU programs have done the same.

linux.

GNU/Linux. yes. Linux is only GNU/Linux. yes. Linux is only the kernel. The rest is GNU. It is only fair to call it GNU/Linux. Thank you GNU, thank you Linus Anonymous April 19, 2016 @ 7:20 pm Reply I saw some slides in 2011 I saw some slides in 2011 that estimated (in lines of code) an 8% of GNU in Ubuntu. Most likely that percentage has

Christopher Tozzi April 19, 2016 @ 9:01 pm Reply I have seen the 8 percent I have seen the 8 percent figure before, going back several years, but I have found not a reliable source for it. Not sure I buy it. Circa 1999 the figures for a complete distribution were: 3 percent code from Linux kernel, 30

percent from GNU and the rest from other projects (BSD stuff, etc.). (According to a March 1999 Wired article.)

I can believe the kernel now accounts for a higher portion, though, since Linux has become much bigger since

Obviously this is a hard thing to measure, anyway. Do you count total lines of code? Individual programs?

Again, make a distribution with only GNU software and call it GNU/Linux. But modern OS are a lot more than that. It's

I have respect for Richard Stallman ideology and work, but when you hear him talking about Linux and Linus you can

And Stallman would no doubt point out that a lot of the crucial tools GNU provides are not necessarily in the distribution. For example GCC and GDB are not in Ubuntu by default but you certainly can't build Ubuntu without them. Going back to early days Stallman was emphatic about how Linux the kernel would never have existed if GNU didn't provide Torvalds the free tools he needed to program and compile it — which I think is very true; commercial assemblers, compilers etc. at the time were way beyond Torvalds's reach. Anonymous April 20, 2016 @ 10:16 am Reply

Just because it is GPL or Free Software it doesn't come from the GNU project. Still, Stallman considers that GNU's packages are more relevant to the general system that (say) a desktop environment or a media player, which is the reason why he considers it should be called GNU/Linux. Anonymous August 18, 2016 @ 1:08 am Reply Oh just shut up you Oh just shut up you nonsensical bumbling fool of today's interwebs generation. Go play with your Samsung or

Iphone recyclable toy and leave the technology wizards out of your narcissistic trolling schedule.

"The rest is GNU." KDE is GNU? Really? How about mono (ok, that might as well just go). gcc used to be GNU, but I suspect Red

Had (who have now owned it for decades) almost certainly haven't ever called it GNU. It might have started out as GNU+Linux,

No, it isn't. Although several important pieces of software belong to the GNU project, some others don't.

but that was a long time ago. The only reason now to call anything GNU/Linux is to compare it against Android (which as far as I know is non-GNU/Linux). Anonymous April 20, 2016 @ 11:34 am Reply Thanks FSF (RMS) thanks Thanks FSF (RMS) thanks Linus, Thanks every one who has contributed.

The problem with dismissing The problem with dismissing terrorism as causing fewer deaths than smoking or sugar is that it ignores human psychology. By our inborn nature we tend to fear risk more when it is imposed by others than when we choose it; more when it is concentrated in time and place than distributed; more when it is a result of malice rather than accident or indifference; more when it is unusual or unnatural than when it is ordinary or natural. The nature of terrorism is that it falls on the more frightening side of all these

To go further, dismissing the reactions of others to terror is a form of boasting of your own superiority to them, of denigrating human beings for reacting like humans with emotions who experience more distress and suffering when a young family is killed by terror than when a hundred elderly people die in their 70s rather than their 80s because they used tobacco. jackparker December 21, 2016 @ 7:20 am Reply **Cosmetic breast augmentation** Cosmetic breast augmentation endoscopic approach is aesthetic breast augmentation endoscopic application of modern equipment magnified crisp structure chest cavity, making dissection padded breasts and put the bag inside an easy and

Anonymous June 12, 2017 @ 12:33 pm Reply Stallman knows nothing about Stallman knows nothing about France, French citizens or their history and should just shut up. Leave a comment
